

A-dec 532 Traditional Dental Unit (Project 04-21A) (6/05)

A-dec recently introduced the 500 Series dental delivery system, stating it provides better ergonomics and more flexibility than any other delivery system. The chair-mounted model uses a rotating-arm system that can be easily converted for right or left-handed use. The A-dec 532 is the Traditional-style delivery system that positions the handpiece tubings under the control head. The control head and flexible tubing are said to be ergonomic and to provide increased range of motion. The control head can accept additional handpieces, scalers, curing lights, electric micromotors and an intraoral camera. The corrosion-resistant control block is advertised to be A-decs simplest, most trouble-free control block yet. The deluxe touchpad can be programmed for two operators simultaneously and, upon removal of an instrument from the bracket head, displays the status and other operating parameters. The assistant touchpad provides secondary control of the chair, light, and accessory functions. The self-contained 2-liter water bottle can be mounted either on the delivery arm or inside the optional support center. The A-dec 532 electrical power is dependent on the A-dec 511 dental chair, which can be ordered as either 120VAC 50/60 HZ or 240VAC 50/60HZ.

Manufacturer:

A-dec Inc.

Suggested Retail Price:

A-dec 532 Traditional delivery unit with standard touchpad \$6,950.00
A-dec 532 Traditional delivery unit with deluxe touchpad: \$7,650.00
A-dec 551 Assistants instrumentation arm: \$1,330.00 (P/N 77.0315.00)

Government Price:

A-dec 532 Traditional delivery unit with standard touchpad: \$3,591.56
A-dec 532 Traditional delivery unit with deluxe touchpad: \$3,953.30
A-dec 551 Assistants instrumentation arm: \$687.31 (P/N 77.0315.00)

ADVANTAGES:

- + Performed reliably during the course of this evaluation
- + Solid construction
- + Internal tubing is color-coded for ease of assembly and service
- + Deluxe touchpad allows integration of electric handpiece, scaler, curing light, and camera
- + Deluxe touchpad allows dual provider programming
- + Self-contained water system has a 2-liter capacity

DISADVANTAGES:

- More expensive than other manufacturers units
- Deluxe touchpad may seem complex
- Air pressure gauge located under control head cover
- Can only be used with A-dec 500 series chair

SUMMARY AND CONCLUSIONS:

The A-dec 532 delivery system met most of the laboratory testing requirements of Dental Unit Medical Procurement Item Description #2. The unit is esthetic with smooth contours and displayed consistent and reliable function throughout the course of the evaluation. The A-dec 532 series chair-mounted dental unit is constructed solidly and integrates sleek design with high technology. The unit allows convenient left-to-right conversion, has easily accessible water adjustments for handpieces, and features easy-access to internal components. Most clinical evaluators rated it above average overall and six out of seven would recommend its purchase. The **A-dec 532 chair-mounted dental unit** is rated **Excellent** for use in US Air Force dental facilities.
